Subhiksha Astagirinathan

Backend Developer | Python, Django, Celery | Building Scalable
Web Applications
Puducherry, India

Summary

Backend development isn't just about writing code—it's about
designing ecosystems. After years of studying biological networks,
I know one truth: *every interaction matters*. That's why I architect
systems with the same rigor I once applied to cellular models—
obsessively documenting relationships, isolating variables, and
refusing to call it "done" until the results are reproducible.

What I do best:
Build systems that outthink humans: Like that time I engineered a
role-based access layer that eliminated "Oops, I deleted production"
panic. (Spoiler: Tokens > trust.)
Automate the boring stuff: Built a blog scheduler that runs quieter
than a centrifuge—no manual input, no missed deadlines, just Celery
workers humming in the background.
Argue with code: I'll refactor a Django view until it's as clean as a
sterile workstation.

My coding commandments:
1. If it's not testable, it's not shippable.
2. Database schemas deserve the same respect as lab protocols.
(Normalize or perish.)
3. "Quick fixes" are the duct tape of tech debt—useful until they're
not.

Why I'm here:
- To solve problems where the answer isn't a StackOverflow copy-
paste.
- To write code that survives the next developer's caffeine crash.

Let's connect if you need a backend dev who codes like a scientist
—methodically, skeptically, and with a backup plan for when the
hypothesis fails.

Experience

Zemuria Inc.
1 year 6 months

Back End Developer
October 2024 - April 2025 (7 months)
Puducherry, Puducherry, India

Intern
April 2024 - October 2024 (7 months)
Puducherry, India

Trainee
November 2023 - March 2024 (5 months)
Puducherry, India

Education

Achariya Arts and Science College
Bachelor of Science - BS, Biotechnology · (August 2020 - July 2023)

Immaculate Heart of Mary Girl's Higher Secondary School
Biology, General · (August 2007 - August 2020)
